

Infrastructure - Core activity

CORE ACTIVITY

1. Organization and management of railway traffic
2. Handling of control safety systems
3. Safety of passenger and cargo transport
4. Current and investment maintenance of substructure
5. Construction of substructure objects
6. Current and investment maintenance of superstructure
7. Mechanized maintenance of superstructure
8. Measurement and measuring technology of track geometry
9. Measurement of free profile of track
10. Maintenance of signaling and safety, telecommunication, EE facilities and contact network
11. Introduction of new technologies in station safety system, security of road crossings, and remote control of electrical traction with tendency of further growth
12. Preparation and development of railway regulations
13. Introduction and maintenance of business IT and communication network
14. Development of software applications
